Dear Colleague:
This is a summary of some key findings from your institution's performance on the 2007 National Survey of Student Engagement. We hope you can use this information to stimulate discussion on your campus about how to improve the quality of the undergraduate experience at Drury University.

Sincerely,
George D. Kuh
Chancellor's Professor and Director

Percent of Students Who Participated in High-Impact Educational Practices at Drury University and Selected Peer Institutions

A common question from NSSE users is, "What is the one thing we should do to increase student engagement and success on our campus?" Our answer: Make it possible for every student to participate in at least two high impact activities, one in the first year, and one later related to their major field.

High-impact activities place students in circumstances that essentially demand they interact with faculty and peers about substantive matters. Left to their own devices, many students and faculty members may not do these things. Educationally effective institutions recognize this and create incentives to induce purposeful behavior towards these ends.

Research suggests that promising options for new students are first-year seminars, learning communities, and service learning. In the later years of college, research with faculty, study abroad, internships, and a culminating senior experience serve this purpose. The adjacent figure shows the percent of your students who had some of these experiences compared to students at institutions in your selected peer groups.

Note: The institutions in each of your selected peer groups, as well as the criteria used to define these groups is provided in your NSSE 2007 Selected Peer Groups report.
